Rhoda and Wissler Ranch HOA:

On November 8 and 9, 2010 we conducted our annual assessment of the Wissler Ranch HOA development to inspect for insect, disease and any other forest health related concerns.

While conducting our inspection we identified and flagged 27 active mountain pine beetle trees (see attached maps). We also found three Ips beetle trees (see attached maps). These trees should be removed from the area, taken down and set out in a sunny area away from other trees or mulched before June 2011. I have also included relevant literature forest insects and disease.

The ecosystem structure and function in and around Wissler Ranch is in good shape from our observations.

We appreciate your business and look forward to seeing you next fall.
